Control Components Pty Ltd (CCPL) management is committed to minimising the adverse environmental impacts of the business. As a company involved in supplying equipment used in environmental monitoring and protection, we acknowledge the manmade impacts of society and seek to help where we can.

We aim to provide our staff with the training and facilities to help reduce our organisation's impact on the natural environment.

In order to achieve these goals management has:

- Installed roof mounted solar panels to both our CCPL office and residential houses to help reduce our carbon footprint and offset the businesses electrical requirements
- Switch to Green energy supplier
- Replaced fluorescent lighting in our office with energy efficient LED lighting
- Replaced sodium vapour ceiling lamps from our factory with energy efficient LED lighting
- Engaged with local Government eWaste recycling centres & government sensitive waste initiatives
- Provided each employee with their own at desk recycling waste bins to simplify separation of recyclable goods
- Upgrade office printing equipment to allow all staff to use more efficient hardware able to print double-sided to reduce paper usage
- Switched our office to use Certified recycled office paper
- Continued to look for ways to reduce packaging whilst implementing a company policy of soft plastics recycling

We undertake to:

- Complying with relevant governmental legislation, policies and standards
- Prevent pollution & waste to landfill wherever possible within our organisation
- Continuously assess & look for new ways to further reducing our carbon footprint & water usage

Our Environment Policy hopefully confirms to our business partners, customers and staff that as an organisation we are committed to environmental sustainability.
