IMPROVED ACCURACY

Our advanced calibration system allows us to improve the accuracy of our meters to 2% or better over the full scale.

STATE-OF-THE-ART CALIBRATION

Using automated calibration software & a high-res vision system, we are able to capture and account for the unique flow profile of every meter during calibration.

UNIQUELY SCALED METERS

Each meter is individually scaled based on precise calibration data, using an integrated laser engraving system.

AHEAD OF THE COMPETITION

This new calibration process produces a reliable and dependable accuracy statement that our competition cannot make, because they typically apply general scales.
