FLOW RATE TRANSMITTERS

Flow Rate Transmitter is ideal for batching, industrial process control, mobile hydraulic equipment and computer / PLC controlled hydraulic system monitoring application. Available in analog or pulse outputs.

BENEFITS

Simple to Install
All transmitters are factory calibrated and ship fully assembled. Simply install the transmitter into your system and apply power. No straight plumbing required at inlet or outlet.

Industry Standard Outputs
Transmitters provide proportional analog or pulse outputs that will drive popular data acquisition devices, meters and analog input cards.

Direct Reading
All transmitters provide a visual indication of flow rate that matches the transmitted output.

Weather-Tight Construction
The rugged cast aluminum enclosure is built to NEMA 4X standard and allows installation outdoors and in environments where liquid tight seals are required.

Rugged and Reliable
Without delicate internal components to break, abrade or corrode, the flow transmitter will provide many years of low-maintenance service.

ELECTRONIC TRANSMITTER PERFORMANCE

Power Requirements
12-24 VDC, Regulated

Load Driving capacity
4-20mA: Load resistance is dependent on power supply voltage.

Use the following equation to calculate maximum load resistance: Max Loop Load (Ω) = 50 (Power supply volts - 12).

0-5 VDC (regulated): Minimum load resistance 1000 Ω.

1-5 VDC* (regulated): Minimum load resistance 25 K Ω

Square Wave Pulse: Minimum load resistance 1000 Ω

Transmission Distance
4-20mA and 1-5 VDC (regulated) are limited only by wire resistance and power supply voltage.
<200 feet recommended for 0-5 VDC (regulated) and square wave pulse.

Over-Current Protection
Self limiting at 35mA

Resolution
10-bit (0.1%)

Response Time
<100 milliseconds

*The 1-5 VDC output requires an external 249 ohm resistor (not included with transmitter) to be wired at the receiving device.
