Transmitters of the series XM-800E (XT-800E) provide reliable measurement and control for liquid levels. Additionally they can be used as position sensors for vertical displacements. The transmitters are built according to user-specific requirements. They have proved successful in a wide range of different industrial applications as well as in many special applications.

Depending on liquid level or displacement a magnet equipped float actuates some reed switches located in the stem. The transmitter works according to the principle of a voltage divider. Output signals can be a voltage (XM-800E) or a current (XT-800E) proportional to the float displacement. Such signals can be processed to drive analog or digital displays, give optical or acoustical alarms, or be fed into computers.

Transmitter Series XM-800E-PVDF
(Transmitter Series XT-800E-PVDF)

Application Area: Industry, Chemical Industry
Resolution: 5 +/- 2 mm
Min. Mounting Length: 400 mm
Max. Mounting Length: 3000 mm

Transmitters of the series XM-800E-PVDF (XT-800E-PVDF) provide reliable measurement and control for liquid levels. Additionally they can be used as position sensors for vertical displacements. The transmitters are built according to user-specific requirements. They have proved successful in a wide range of different industrial applications as well as in many special applications.

The PVDF series was specially developed for the foodstuffs industry, medical technology and other particularly exacting chemical applications. The transmitters are able to withstand acids, acidic compounds, bromines and pure media. They are not recommended for use with caustic soda or media having pH values >12.

Materials
- Stem: PVDF
- Float: PVDF
- Flange: PVDF
- Set collars: PTFE
- Junction boxes: ABS

Depending on liquid level or displacement a magnet equipped float actuates some reed switches located in the stem. The transmitter works according to the principle of a voltage divider. Output signals can be a voltage (XM-800E-PVDF) or a current (XT-800E-PVDF) proportional to the float displacement. Such signals can be processed to drive analog or digital displays, give optical or acoustical alarms, or be fed into computers.

Transmitters of the series XM-800R (XT-800R) provide reliable measurement and control for liquid levels. Additionally they can be used as position sensors for vertical displacements. These are developed from the standard series XM-800E. The signal-matching electronic system is integrated into the switching tube. This results in a functional 2-wire transmitter with a 4...20mA output signal, offering all the variations of the standard series for applications where space is limited.

The transmitters are built according to user-specific requirements. They have proved successful in a wide range of different industrial applications as well as in many special applications.

Depending on liquid level or displacement a magnet equipped float actuates some reed switches located in the stem. The resulting signal will be converted into a current signal proportional to the float position. Such signals can be processed to drive analog or digital displays, give optical or acoustical alarms, or be fed into computers.

**Application Area:** Industry, Chemical Industry

**Resolution:** 5 +/- 2 mm

**Electrical connection XT-800R (2-wire)**

- S Plug connector
- P Cable gland
- K6 Junction box
- K11 Junction box

**Wiring diagram XT-800R with voltage signal**

**Function**

The fundamental operating principle of the XT-800R transmitter is the same as that for the XM-800E series. However, when it is connected to a voltage of 10...30VDC, the XT-800R transmitter functions as a current sink, superimposing a 4...20mA current analogous to the float position onto the signal. Two potentiometers are located in the top section of the tube and are visible when the tube is opened (see sketch above). These are used to adjust the upper and lower limiting values (4 and 20mA) within a range of 5%, based on the total length. This makes it possible to make readjustments if the set collar has to be moved slightly. The transmitter will have been adjusted before delivery and will not need to be reopened.

**Technical Data**

XT-800R-Ex transmitters provide a reliable option for level supervision in tanks or containers containing explosive liquids. The transmitters are manufactured in accordance with customers’ specifications and have proved to be successful for many years in a wide range of applications connected to the industrial and chemical sector, and in many special applications.

The float is fitted with magnets, and works by moving with the level of reed contacts located in the switching tube. The transmitter operates in accordance with the principle of voltage division. It provides a voltage proportional to the float position as an output signal, which is then converted by an integral converter to a standardised 4...20 mA signal.

PTFE spacers are placed in front of the set collars to prevent impact sparking.

The appropriate output devices can be connected to provide analogue or digital displays, optical and acoustic alarms and computer inputs.

Safety instructions:

- The transmitter may be used in Zone 0, 1 and 2 and with gas groups IIA, IIB and IIC that are at risk of explosion because of inflammable materials in the temperature classes T1 to T4.
- The highest permitted ambient temperature is 70 °C.
- The transmitter may only be connected to a certified, intrinsically safe electrical circuit having the maximum values (e.g. Zener barriers).
- The equipment must be included in the routine pressure test of the tank.
- The transmitter must be electrically connected to the system’s equipotential system.

15 bar
Operating temp.
-20 °C...150 °C
-20 °C...150 °C
-20 °C...150 °C
Minimum density of the liquid
0.85 g/cm³
0.75 g/cm³
0.60 g/cm³
Immersion depth at density = 1 g/cm³
40 +/- 2mm
42 +/- 2mm
32 +/- 2 mm

* Versions with protection tube (damping tube) on request
**Electrical connection XT-800R-Ex (2-wire)**

- S Plug connection
- P Cable gland
- K11 Junction box

* Cable (82667)
  PVC, blue 2x 0.75², shielded
  WH = + / BN = -

**Wiring diagram XT-800R-Ex with voltage output**

**Function**

The fundamental operating principle of the XT-800R transmitter is the same as that for the XM-800E series. However, when it is connected to a voltage of 10...30VDC, the XT-800R transmitter functions as a current sink, superimposing a 4...20mA current analogous to the float position onto the signal. Two potentiometers are located in the top section of the tube and are visible when the tube is opened (see sketch above). These are used to adjust the upper and lower limiting values (4 and 20mA) within a range of 5%, based on the total length. This makes it possible to make readjustments if the set collar has to be moved slightly. The transmitter will have been adjusted before delivery and will not need to be reopened.

**EEx ia IIC T4**

- U: 30 V
- I: 150 mA
- P: 1.13 W
- C: 120 nF
- L: 0 mH

**EEx ib IIC T4**

- U: 30 V
- I: 150 mA
- P: 1.13 W

The effective internal inductance and capacitance are negligibly small.
**Order data**

Type key:
XT-800R-Ex-...-...-

- **Electrical connection**
  - S Plug connection
  - K11-Ex Junction box
  - P-PVC PVC cable, with cable gland
    (Standard length 3m)

- **Float**
  - C44 316/316L
  - C53 316/316L
  - Ti62 Titanium

- **Mounting elements**
  - BCCC Flange 316/316L
  - Other flanges on request
  - TC 2 Tank screw 316/316L

**Dimensions**

- LO Mounting length (LO max. = 3000 mm)
- A Indication length (float displacement)
- C1 Upper deadline
- C2 Lower deadline min. 15 mm
- H Float height

LO = A + C1 + C2 + H

For versions with an upper set collar:

C1 = minimum measure* + set collar thickness (8mm)

* minimum measure see below mounting elements

**Typical order data XT-800R-Ex-TC2-C53-P-PVC3 (example)**

- LO Mounting length 740 mm
- A Indication length 590 mm
- C1 Upper deadline 65 mm
- C2 Lower deadline 15 mm
- TC 2 Tank screw 316/316L 2"
- C53 Float H=70 mm
- P Cable gland
- PVC3 3 m PVC-cable
